### **VAL-MATIC ENER•G® BALL VALVE**

Do you need a valve that can handle surge control and save energy at the same time? Val-Matic's Ener•G® Ball Valve is the perfect solution for both in municipal and industrial water and wastewater applications. The Ener•G® Ball Valve is the ideal pump control valve for pumping systems. Its equal percentage flow characteristics, rugged AWWA construction and negligible headloss make it the preferred choice. When fully open, the Ener•G® Ball Valve provides 100% flow area equal to the pipe size and will represent a significant savings in pumping costs compared to other pump control valves. The valve's design and performance have been verified through proof of design and independent flow testing. The valve is available with cylinder, electric motor or manual actuation. For additional information on Ener•G® Ball Valves visit [www.valmatic.com](http://www.valmatic.com).
