ENERGY COST CALCULATOR

Val-Matic's *Energy Cost Calculator for Valves* projects 40-year energy cost savings. Since valve selection affects energy consumption in pumping systems, this program allows you to enter specific application information which will then calculate headloss and your 40-year energy costs for various valve types. Smaller than line size valves can also be evaluated with consideration to the headloss from the upstream and downstream pipe reducers. The scope of the Energy Cost Calculator also includes larger AWWA Ball and Eccentric Plug Valves up to 72 inch sizes. Visit www.valmatic.com to start calculating your energy savings today.
