VAL-MATIC CONTROL SYSTEMS

Val-Matic Control Systems provide low maintenance and reliable control of butterfly, plug and ball valves equipped with cylinder actuators. Hydraulic and electric panels control the valves with air, oil or water power. Val-Matic's control systems have exclusive features for hydraulic and electric panels such as waterproof and corrosion-resistant enclosures, rigid brass pipe with heavy duty hose and fittings, supply line with isolation valve and pressure gauge and heavy-duty switches and transformer pilot lights. In addition to control panels and oil accumulator systems, Val-Matic valves can be equipped with limit switches, pressure switches and positioners for remote control and operation. Visit our website at www.valmatic.com if you'd like more information on any of Val-Matic's Control Systems.
