## **GOODBYE HEADLOSS, HELLO SAVINGS ARTICLE**

Val-Matic's Ener•G® AWWA Resilient Seated Ball Valve was the preferred solution for the East Cherry Creek Valley (ECCV) Treatment Plant's \$35 million-dollar renovation in Aurora, Colorado. Val-Matic's Ener•G® AWWA Rubber Seated Ball Valves have been used at ECCV since 2006 with notable success in their Northern and Southern Booster Pump Stations. Phase two of the project included additional water rights including the construction of a state-of-the-art reverse osmosis treatment plant where additional Val-Matic Ener•G® Rubber Seated Ball Valves were installed because of the valve's capability to provide tight seating, long life, and energy savings. See how the Val-Matic Ener•G® Ball Valve proved to be the perfect solution for the ECCV Treatment Plant by providing exceptional performance, low headloss, and cost saving in the "Goodbye Headloss, Hello Savings!" Case Study located at [www.valmatic.com](http://www.valmatic.com).
