VAL-MATIC QUADROSPHERE® BALL VALVE

Val-Matic's QuadroSphere® Ball Valve, with its unique abrasion resistant ball design, solves the most difficult application problems in industries such as Oil & Gas Pipelines, Marine, Refining, Geothermal, Power, Chemical, Pulp & Paper, Mining/Steel. The four recessed surfaces of the ball provide multiple flow paths through the valve and provide for self-flushing to prevent clogging by avoiding high scale and solids build up while also protecting the seats from damage. Reduced seat engagement results in lower running torques and up to seventy percent less wear. The QuadroSphere® with over 20 years of proven experience is available in sizes 2 NPS and larger in pressure classes from 150-2500 with a variety of body, seat and seal materials to meet your specific application needs. The QuadroSphere® is designed in accordance with API 6D and ASME B16.34 requirements, carries the API 6D Monogram and has been certified to API 607, Fire Test standard. The QuadroSphere® meets standards: API, ASME/ANSI, BS, ISO, MSS and NACE.
