VAL-MATIC ZINC-RICH COATING SYSTEM

Installing valves with Val-Matic's Zinc-Rich Coating System ensures corrosion resistance for the entire pipeline system. Val-Matic's coating features a protective, reinforced zinc-rich primer base coat and a high-performance, chemically-cured epoxy top coat which provides exceptional abrasion and corrosion resistance. Zinc has a lower electrode potential on the galvanic series and therefore acts as a sacrificial galvanic anode to help protect iron in corrosive environments. The result is a reliable coating system with exceptional abrasion and corrosion resistance ideally suited for buried valves, especially those in contact with zinc-coated iron pipe. Visit www.valmatic.com for more information on Val-Matic's Zinc-Rich Coating System.
