### **VAL-MATIC ENER•G® BALL VALVE**

Did you know Val-Matic's Ener•G® Ball Valve can be used in pump control? For pumping systems where surge control is critical and energy savings are important, a pump control ball valve is preferred. The valve is wired to the pump controls and provides adjustable opening and closing times in excess of the system critical surge period. Unlike check valves, the pump control ball valve's speed of operation is not affected by the line flow or pressure conditions. Stable operating times are essential in controlling surges in pumping systems. A Val-Matic Ener•G® Ball Valve is the ideal pump control valve for pumping systems. Its equal percentage flow characteristics, rugged AWWA construction and negligible headloss make it the preferred choice. For more information on Val-Matic's Ener•G® Ball Valve visit [www.valmatic.com](http://www.valmatic.com).
