VAL-MATIC SWING CHECK VALVES

Rugged construction and full flow area make Val-Matic's Swing Check Valve the most specified check valve for municipal and industrial water and wastewater applications. Its smooth unrestricted design can provide significant savings in pumping costs over other check valves with reduced ports. The available closure options of Lever & Weight, Air Cushion, and Lever & Spring allow the valve to be used effectively in a wide range of pumping system applications. Metal-to-Metal seating is also available with reliable operation under the harshest of conditions. Both resilient and metal seated Swing Check valves are designed, built and tested for compliance with ANSI/AWWA C508, NSF/ANSI 61, NSF/ANSI 372 and MSS SP-71/MSS SP-136.
